$V = C(10 - 1)^n$  where C is a constant and n and n are the exponents. We expect C, n, and n to be positive integers or simple fractions. As discussed in Experiment III (Centripetal Force), the standard way to determine the power law exponents is to create a log-log plot and the slope of that plot would yield the exponent. Standing Wave: If you vibrate one end of a string and keep the other ...
