Plague is a flea-transmitted infection of rodents caused by *Yersinia pestis*. Fleas incidentally transmit the infection to humans and other susceptible mammalian hosts. Percutaneous inoculation of the plague bacillus in humans typically initiates inflammation of lymph nodes draining the inoculation site, resulting in bubonic plague.

Plague | SpringerLink

Plague is a zoonotic disease of rodents and their fleas caused by *Yersinia pestis*. Fleas infected by feeding on a diseased rodent may transfer the infection to other rodents and to man. Commonly, the initial response, in man and in rodent, is a lymphadenitis, adjacent to the site of the bite.

Certainly revived by the growing fear about new pandemic influenzas, 2 this kind of cultural imprinting has its deepest roots in the plague. It is no mere chance that, at least in Italian, this disease has the same name as the Horseman who represents death caused by any illness, nor that the English term 'plague', which strictly speaking indicates an epidemic caused by a specific disease ...

The term plague has been used to loosely define widespread, devastating diseases. Strictly, the term applies today to infection by the *Pasteurella pestis* (*Yersinia pestis*) bacterium. The disease may occur in three main forms: bubonic plague (most important diagnostic features of is swelling lymph nodes, particularly in the groin area), pneumonic plague (attacking the respiratory system) and ...

Three well-documented plague pandemics have occurred in the past two millennia, resulting in more than 200 million deaths and great social and economic chaos (Perry and Fetherston, 1997; Pollitzer, 1954).

Plague as a Biological Weapon | SpringerLink

The primary mode of plague transmission is through the bite of infected fleas, while transmission of tularemia is caused through the bite of several hematophagous arthropods. These diseases can be found throughout the world: the plague

persists in natural foci in countries Africa, Asia, Europe, and the Americas, while tularemia is restricted to countries in the northern hemisphere.

Plague and Tularemia | SpringerLink

Abstract Plague has had a long and remarkable association with humankind, causing incalculable pain and suffering, thus it should not be surprising that some of the first vaccine efforts were directed against this dreaded disease. The first effective plague vaccines were developed through the efforts of the Pasteur Institute in the late 1890s.

Paleomicrobiology - Past Human Infections - Springer

Since plague has taken many human lives in the past. It is not surprising that one of the first attempts to create a vaccine was an attempt to develop a vaccine against the plague. The first effective plague vaccine was created by The Institut Pasteur in late 1890s. It was a killed vaccine. After that, live attenuated vaccines were developed . Currently, two types of plague vaccines are used globally: killed-whole cell (KWC) and live whole-cell (LWC).

Human response to live plague vaccine EV, Almaty region ...

Plague is caused by the bacterium *Yersinia pestis*, and is a zoonotic disease mainly affecting rodents. Humans are occasionally infected through fleabites, thereby causing bubonic plague (BP) or by inhalation of infectious droplets leading to pneumonic plague (PP); the rarest but most contagious form.
