The transfer of genetic variability from related species into crops has been a main objective for decades in breeding programs. Breeders have used interspecific genetic crosses and alien introgression lines to achieve this goal, but the success is always dependent on the interspecific chromosome associations between the alien chromosomes and those from the crop during early meiosis.

## Chromosome Manipulation for Plant Breeding Purposes

Plant Breeding. Plant breeding: is the technique of altering the traits of plants in order to produce desired characteristics. New crop varieties or lines with interesting properties are then created. It has been used to improve the quality of nutrition in products for humans and animals.
