It rests on the belief that only faster growth can lift people out of poverty and generate more resources for creating a redistributive design. This is a contestable argument, given the inequality enhancing nature of economic growth we have seen in different parts of the world in the last three decades. It would be instructive to go beyond standard narratives to acknowledge the fact that growth doesn't automatically translate into better living conditions for people, especially when the ...

Productive transformation requires seizing the opportunities available and opening new ones in a competitive world. Rethinking Productive Development examines the market failures impeding transformation and the government failures that may make the policy remedies worse than the market illness. To address market failures, the authors propose a simple conceptual framework based on the scope and nature of the policy approach.

Economic development of frontier and remote regions has long been a central theme of development studies. This book examines the development experience in the northeastern region in India in relation to the processes of globalisation and liberalisation of the economy. Bringing together researchers and scholars, from both within and outside the region, the volume offers a comprehensive and updated analysis of governance and development issues in relation to the northeastern economy. With its multidisciplinary approaches, the chapters cover a variety of sectors and concerns such as land, agriculture, industry, infrastructure, finance, human development, human security, trade and policy. This book will be useful to scholars and researchers of economics, public policy, governance and development, geopolitics, geography, development studies, politics and sociology of development and area studies as well as observers and policymakers interested in the Northeast.

Examines the structure of and trends in Arab labour markets, investigates the labour demand for and supply of labour that determine employment and the institutional framework that determines decent work, especially social protection and social dialogue. Focuses on the development that took place mainly in the period from 1990 to 2010, when economic reforms were initiated in many Arab states.

Since the beginning of the 21st century, there has been an unprecedented move towards 'rethinking economics'. This book contributes to this worldwide discussion by providing readers at all levels with thoughtful contributions on a range of economic topics. The book includes chapters on rethinking fiscal and monetary policies, international trade, the role of the state, money, growth, the environment, development policies, energy, healthcare and more. Written by top experts in their respective fields, this book will be useful to students and faculty who want to not only rethink economics, but also to offer an alternative and coherent economic analysis to the orthodoxy.

This volume examines the history of developmental policy in Sub-Saharan Africa and considers how different policy options might generate sustained economic growth and reduce poverty. It documents and interprets policy lessons and considers how to translate them to particular country contexts.

This book upturns many established ideas regarding the economic and social history of Quebec, the Canadian province that is home to the majority of its French population. It places the case of Quebec into the wider question of convergence in economic history and whether proactive governments delay or halt convergence. The period from 1945 to 1960, infamously labelled the Great Gloom (Grande Noirceur), was in fact a breaking point where the previous decades of relative decline were overturned – Geloso argues that this era should be considered the Great Convergence (Grand Rattrapage). In opposition, the Quiet Revolution that followed after 1960 did not accelerate these trends. In fact, there are signs of slowing down and relative decline that appear after the 1970s. The author posits that the Quiet Revolution sowed the seeds for a growth slowdown by crowding-out social capital and inciting rent-seeking behaviour on the part of interest groups.

The dominant approach to economic policy has so far failed to adequately address the pressing challenges the world faces today: extreme poverty, widespread joblessness and precarious employment, burgeoning inequality, and large-scale environmental threats. This message was brought home forcibly by the 2008 global economic crisis. Rethinking Economic Policy for Social Justice shows how human rights have the potential to transform economic

thinking and policy-making with far-reaching consequences for social justice. The authors make the case for a new normative and analytical framework, based on a broader range of objectives which have the potential to increase the substantive freedoms and choices people enjoy in the course of their lives and not on not upon narrow goals such as the growth of gross domestic product. The book covers a range of issues including inequality, fiscal and monetary policy, international development assistance, financial markets, globalization, and economic instability. This new approach allows for a complex interaction between individual rights, collective rights and collective action, as well as encompassing a legal framework which offers formal mechanisms through which unjust policy can be protested. This highly original and accessible book will be essential reading for human rights advocates, economists, policy-makers and those working on questions of social justice.
