Modeling, Optimization and Simulation in Operations ...

For some years now simulation experts have pointed at the potentials of and the need to use simulation at operational level in production management. A number of papers dealing with manufacturing simulation has also tried to address simulation's place in a CIM environment.

7. OPERATIONAL USE OF SIMULATION IN PRODUCTION MANAGEMENT ...

Simulation Definition. Simulation typically uses statistical and computer modelling to investigate the performance of a business process either for a new situation or to improve an existing set of processes. By modelling different process scenarios and outcomes, companies can minimise the traditional risks associated with change management initiatives without having to make changes in a 'live' business environment where performance could adversely be affected (Harrington and Tumay, 2000).
