Description This book deals with switching, signaling and traffic in the context of telecommunication networks. Its coverage moves from an introduction to those networks through the evolution of switching systems from electromechanical systems to stored-program-controlled digital systems and future broadband systems.

switched telephone network (PSTN). PSTN consists of transmission component, switching components and facilities for maintaining equipment, billing system and other internal components. PSTN also referred to as plain old telephone system (POTS).

Lecture Notes Faculty: S. Agrawal

A Telecommunication network is a group of systems that establishes a distant call. The switching systems are part of a telecommunication network. The switching stations provide connection between different subscribers. Such switching systems can be grouped to form a telecommunication network. The
