Coolant Temperature Sensor | Pep Boys

The engine coolant temperature sensor is responsible for sending the temperature of the engine to the DME and the instrument cluster. It is a four wire sensor, with two separate circuits, one for the instrument cluster and one for the DME. If you have a coolant sensor fault code stored in your DME and your engine isn't running right, I suggest replacing the sensor before digging too deep.

BMW E36 Coolant Temperature Sensor Testing & Replacement

Coolant is necessary to keep the engine from overheating during combustion, so when that sensor breaks down, the car won't know when to provide coolant to keep the engine at the right temperature. To have this sensor replaced, you will pay somewhere between \$95 and \$140, depending both on the car you have and the mechanic's fees.
