The automation testing software can also enter test data into the System Under Test, compare expected and actual results and generate detailed test reports. Test Automation demands considerable investments of money and resources. Successive development cycles will require execution of same test suite repeatedly. Using a test automation tool, it's possible to record this test suite and re-play it as required. Once the test suite is automated, no human intervention is required.

Lesson 4: Automated
Testing
Common definition of
integration tests would be
“unit tests, kind of, but
they use the real
database/filesystem/etc
instead of mocking/stubbing
it.”

~~Automated Testing or Test
Automation? You Need Both~~
As test engineers, how often
have we proclaimed that test
automation code is real
code— and should be treated
like any other development
project? I say it all the
time. Since test automation
code is development code, it
should adhere to the same
standards —code reviews and
the like—just like any other
development effort.
