In a forthcoming book The Boy in 7 Billion, Callie Blackwell claims that cannabis oil, which she had started giving her son Deryn to relieve his symptoms during a bone marrow transplant for two cancers, actually saved his life when the bone marrow transplant appeared to be failing. Unfortunately, her story appears to be another testimonial that confuses correlation with causation.

Deryn Blackwell is a walking, talking miracle. At the age of 10, he was diagnosed with Leukaemia. Then 18 months later he developed another rare form of cancer called Langerhan's cell syndrome. Only five other people in the world have it, he is the youngest of them all and the only person in the world known to be fighting it alongside another cancer, making him one in seven billion. This is the true story of the extraordinary lengths that a mother went to, to help her dying son.

One of the richest young men of twenty-second-century Earth, Shelby Crawford Jerome Prescott Cheever V finds himself stranded on a mining ship twenty-seven light years from Earth, where he must learn to survive without all his vast wealth. Reissue.

This heart-wrenching story immerses readers in the dramatic survival of one outspoken man who illuminates the souls of a billion ordinary Chinese citizens. An Wei—a stubborn, hardworking peasant who has lived by his values and stood up for his convictions—has succeeded against all odds in the authoritarian environment of China. Despite grinding poverty, hunger, reeducation campaigns, and attacks from jealous peers, An Wei continues to inspire with his daring achievements, such as launching a democratic congress in his own village. His compelling life provides a vivid backdrop for understanding the development of modern China from the unique perspective of an outspoken citizen. Through his audacious determination and survival skills forged in rural poverty, An Wei's unstoppable drive to improve himself and rural China will captivate and enthrall readers.

Discusses the cultural and political changes in China that have increased consumption and decreased emphasis on Chairman Mao.

Moneyball meets medicine in this remarkable chronicle of one of the greatest scientific quests of our time—the groundbreaking program to answer the most essential question for humanity: how do we live and die?—and the visionary mastermind behind it. Medical doctor and economist Christopher Murray began the Global Burden of Disease studies to gain a truer understanding of how we live and how we die. While it is one of the largest scientific projects ever attempted—as breathtaking as the first moon landing or the Human Genome Project—the questions it answers are meaningful for every one of us: What are the world's health problems? Who do they hurt? How much? Where? Why? Murray argues that the ideal existence isn't simply the longest but the one lived well and with the least illness. Until we can accurately measure how people live and die, we cannot understand what makes us sick or do much to improve it. Challenging the accepted wisdom of the WHO and the UN, the charismatic and controversial health maverick has made enemies—and some influential friends, including Bill Gates who gave Murray a \$100 million grant. In *Epic Measures*, journalist Jeremy N. Smith offers an intimate look at Murray and his groundbreaking work. From ranking countries' healthcare systems (the U.S. is 37th) to unearthing the shocking reality that world

governments are funding developing countries at only 30% of the potential maximum efficiency when it comes to health, Epic Measures introduces a visionary leader whose unwavering determination to improve global health standards has already changed the way the world addresses issues of health and wellness, sets policy, and distributes funding.

"This picture book is one in a gazillion."--Jane O'Connor, the New York Times-bestselling author of the Fancy Nancy series Did you know that the earth is covered in three trillion trees? And that seven billion people weigh about the same as ten quadrillion ants? Our world is full of constantly changing numbers, from a hundred billion trillion stars in space to thirty-seven billion rabbits on Earth. Can you imagine that many of anything? The playful illustrations from New York Times-bestselling artist Isabel Greenberg and the friendly, straightforward voice of author Seth Fishman illuminate some of the biggest numbers in the universe--a hundred billion trillion stars--and the smallest--one unique and special YOU. Here is a book for story time, for science time, for math time, for bedtime, and all the times in between. Perfect for curious children, classrooms eager for STEM content, and readers who have devoured Ada Twist, Scientist and How Much Is a Million?

Pulitzer Prize-winning journalists Mark Johnson and Kathleen Gallagher chronicle the story of Nic Volker, the Wisconsin boy at the center of a daring breakthrough in medicine--a complete gene sequencing to discover the cure for an otherwise undiagnosable illness. At just two years old, Nic experienced a searing pain that signaled the awakening of a new and deadly disease. For years, through false starts and failed cures, Nic holds on to life, buoyed up by his mother's fierce drive to get him the care he needs. But when even the world's experts are stumped by Nic's illness, his doctors come up with a radical, long-shot plan: a step into the unknown. The next major scientific frontier, following the completion of the Human Genome Project, was to figure out how to use our new knowledge to save lives--to bring genomic or personalized medicine into reality. The quest is undertaken by researchers around the world, but it is only when geneticist Howard Jacob hears about young Nic that the finish line finally comes into sight: It's no longer a race to make history. It's a race to save this boy's life.--Adapted from dust jacket.

Two ships race in from outer space and crash in the Pacific Ocean. One contains a hunter, entrusted with a vital mission. The other, his quarry - corrupt, evil, a criminal from an unearthly civilisation light years away. Yet both these creatures had one thing in common - they were unable to exist alone. Each needed a host, a human body they could invade and control

"In the grand tradition of Ben Mezrich's *The Accidental Billionaires* (2009)... an engaging look into a fascinating subculture of millions." —Booklist
"Breezy...How to Turn Down a Billion Dollars ably if uncritically chronicles the short history of a young company catering to young users, with a young chief executive, and reveals, intentionally or not, the limitations that come with that combination." —Wall Street Journal
The improbable and exhilarating story of the rise of Snapchat from a frat boy fantasy to a multi-billion dollar internet unicorn that has dramatically changed the way we communicate. In 2013 Evan Spiegel, the brash CEO of the social network Snapchat, and his co-founder Bobby Murphy stunned the press when they walked away from a three-billion-dollar offer from Facebook: how could an app teenagers use to text dirty photos dream of a higher valuation? Was this hubris, or genius? In *How to Turn Down a Billion Dollars*, tech journalist Billy Gallagher takes us inside the rise of one of Silicon Valley's hottest start-ups. Snapchat developed from a simple wish for disappearing pictures as Stanford junior Reggie Brown nursed regrets about photos he had sent. After an epic feud between best friends, Brown lost his stake in the company, while Spiegel has gone on to make a name for himself as a visionary—if ruthless—CEO worth billions, linked

to celebrities like Taylor Swift and his wife, Miranda Kerr. A fellow Stanford undergrad and fraternity brother of the company's founding trio, Gallagher has covered Snapchat from the start. He brings unique access to a company Bloomberg Business called "a cipher in the Silicon Valley technology community." Gallagher offers insight into challenges Snapchat faces as it transitions from a playful app to one of the tech industry's preeminent public companies. In the tradition of great business narratives, *How to Turn Down a Billion Dollars* offers the definitive account of a company whose goal is no less than to remake the future of entertainment.

In essence, this story is about how a certain person was searching his bookshelf for something to read and in the end found a book, which turned out to be the source, from which it is possible to obtain absolutely any kind of information about absolutely any person. Meaning, information to the smallest particulars and details about what his or her qualities of personality are, how he or she lives, what he or she really wants to achieve, what he or she hides, and much more. And, it does not matter, if the subject is some person, who lived in the distant past or lives in the present or someone, who will live in the future. Since, as it turned out later on, this literary monument is nothing other than the Catalog of human population. In other words, the encyclopedia of *Homo sapiens*; in essence, the same as encyclopedias, reference books for specialists, which contain complete information about representatives of a particular subspecies of animals, plants, etc. Although at some point, the course of this story turned banal: "bad guys" from security services, intelligence services, politics decided to not only use this source of knowledge for their dirty deeds, but also to appropriate it solely for their personal use. And, the way they tried to do this is also banal: by physically destroying the author of discovery of the Catalog of human population and all of his colleagues. However, the ending of this story makes it stand out from the category of ordinary spy stories. At least because the main characters of this story managed to survive not due to favorable concatenation of circumstances or someone's help, but thanks to that knowledge, which they discovered in the ancient text, which turned out to be the Catalog of human population. Of course, such an outcome upset and continues to upset not only the Russian special services, but also all those people in whose way developers of the Catalog of human population got. And, in this civilization, there are countless numbers of such people: from psychologists (who become no longer needed by anyone) to organizers of this civilization themselves. Since from the standpoint of the Catalog of human population—technogenic civilization without a human, which they lovingly built for many centuries, is simply trash, to put it mildly, and beneath all criticism. And, they themselves are also trash. However, regular people, who (thanks to the scientific discovery made by Andrey Davydov) got the source with answers to all of their questions and individual recipes, now no longer need to pay "experts on the human soul" for being shamelessly fooled. Therefore, whoever tries to kill developers of the Catalog of human population in the future must know that it is no longer possible, as they already became part of history of humanity. After all, at the current stage of development, a *Homo sapiens* has only one possibility to continue to live after death, to live through the ages: in the product that he/she created. And, those, who tried and continue to try to kill them, were nobodies and will remain nobodies, who one day will cease to exist without leaving a trace. As for organizers of this "civilization"—maybe instead of trying to find new recipes to destroy "excess billions" and trying to examine human potential using Neanderthal methods, it would be more reasonable not only to find out the recipe of how to make *Homo sapiens* a 100% controllable producer and consumer from the source (which, by the way, seems to have been left to humanity by creators of nature and a human on this planet), but also how to build a civilization without quotes? After all, it only seems to them that they are the main deceivers, while in reality they were fooled, and fooled majorly.
