The Sunday Times top ten bestseller... You're not going home. You're not going anywhere. You're mine now. Growing up in a deeply troubled family, 15-year-old Anna felt lost and alone in the world. So when a friendly taxi driver befriended her, Anna welcomed the attention, and agreed to go home with him to meet his family. She wouldn't escape for over a decade. Held captive by a sadistic paedophile, Anna was subjected to despicable levels of sexual abuse and torture. The unrelenting violence and degradation resulted in numerous miscarriages, and the birth of four babies... each one stolen away from Anna at birth. Her salvation arrived thirteen years too late, but despite her shattered mind and body, Anna finally managed to flee. This is her harrowing, yet uplifting, true story of survival.

The award-winning book that inspired an Apple Original series from Apple TV+ • Pulitzer Prize winner Sheri Fink ' s landmark investigation of patient deaths at a New Orleans hospital ravaged by Hurricane Katrina—and her suspenseful portrayal of the quest for truth and justice. In the tradition of the best investigative journalism, physician and reporter Sheri Fink reconstructs 5 days at Memorial Medical Center and draws the reader into the lives of those who struggled mightily to survive and maintain life amid chaos. After Katrina struck and the floodwaters rose, the power failed, and the heat climbed, exhausted caregivers chose to designate certain patients last for rescue. Months later, several of those caregivers faced criminal allegations that they deliberately injected numerous patients with drugs to hasten their deaths. Five Days at Memorial, the culmination of six years of reporting, unspools the mystery of what happened in those days, bringing the reader into a hospital fighting for its life and into a conversation about the most terrifying form of health care rationing. In a voice at once involving and fair, masterful and intimate, Fink exposes the hidden dilemmas of end-of-life care and reveals just how ill-prepared we are for the impact of large-scale disasters—and how we can do better. A remarkable book, engrossing from start to finish, Five Days at Memorial radically transforms your understanding of human nature in crisis. One of The New York Times' Best Ten Books of the Year

70 years later, the bombing of Pearl Harbor comes to life for a new generation of readers!History's most terrifying moments are brought vividly to life in the action-packed fictional I SURVIVED series! Do you have what it takes to survive ... the bombing of Pearl Harbor?Eleven-year-old Danny Crane is alone on his favorite beach in Hawaii when the world is torn apart and World War II officially hits the United States. Does he have what it takes to find his way home in the midst of the bombs, the smoke, and the destruction of the day that will live in infamy?

The U.S. spends the most in the world on health care and research, yet our outcomes are among the worst in industrialized nations. Hundreds of thousands die every year from medical harm. Imagine a world where health care took a page from the IKEA furniture company---where expenses were streamlined, quality was predictable, customers participated, and everyone shared in the cost savings. Through colorful analogies, stories from families and top doctors, and the author ' s quest to find out what happened to her own father, Design to Survive serves up key strategies for patients, families and providers, with the conviction that we can do better.

Stephen Smith is the boy who did not exist. Born out of wedlock in the early 1960s, Steve's parents hid him away from the world by locking him in the cellar...for thirteen years. Starved and beaten, the little boy's world was a darkened room that measured just eight feet by ten with a single makeshift bed, bare light bulb, and a solitary table. Steve would spend his days conjuring up an imaginary world full of monsters he would draw to try and block out the physical and mental torture inflicted on him by his brutal father. Apart from a few admissions to hospital as a result of his 'imprisonment', Steve remained in the coal cellar of the family home where he was deprived of daylight, his childhood, school, and human contact until he'd reached his teenage years. Eventually, he escaped only to fall prey to the instigators of two of the worst cases of institutional abuse in the UK at Aston Hall hospital and St. William's Catholic School. The Boy in the Cellar is a horrifying true story of torture and cruelty, that reveals a human's full capacity to fight for survival and search out happiness and hope.

On October 13, 1972, an Uruguayan air force plane carrying members of the Old Christians rugby team—and many of their friends and family members—crashed in the Andes mountains. I Had to Survive offers a gripping and heartrending recollection of the harrowing brink-of-death experience that propelled survivor Roberto Canessa to become one of the world ' s leading pediatric cardiologists. As he tended to his wounded teammates amidst the devastating carnage, rugby player Roberto Canessa, a second-year medical student at the time, realized that no one on earth was luckier: he was alive—and for that, he should be eternally grateful. As the starving group struggled beyond the limits of what seemed possible, Canessa played a key role in safeguarding his fellow survivors, eventually trekking with a companion across the hostile mountain range for help. No one could have imagined that there were survivors from the accident in such extreme conditions. Canessa's extraordinary experience on the fine line between life and death became the catalyst for the rest of his life. This uplifting tale of hope and determination, solidarity and ingenuity, gives vivid insight into the world-famous story that inspired the movie Alive! Canessa also draws a unique and fascinating parallel between his work as a doctor diagnosing very complex congenital cardiopathies in unborn and newborn infants and the difficult life-changing decisions he was forced to make in the Andes. With grace and humanity, Canessa prompts us to ask ourselves: what do you do when all the odds are stacked against you?

This book, written by a doctor and a lawyer, explains to everyday readers ways in which they can avoid death and injury caused by medical mistakes. It may be shocking to learn that preventable errors by doctor and hospital personnel are a leading cause of death and injury in the United States—perhaps even exceeding the annual deaths caused by heart disease and cancer. But avoiding these mistakes is possible, and the rules found in this book will arm readers against the careless errors that lead to such deaths and injuries. From hospitals to doctors' offices, medical professionals are overwhelmed, overtired, even overworked and mistakes are sometimes unavoidable even with the best safety measures in place. A resident at the end of a 36-hour on-call stint may forget to wash her hands before performing a surgical procedure. A chart may be mismarked. Medications may be inaccurately listed. Test results may be inaccurately interpreted. But patients are in a position to help themselves and their medical caregivers to avoid these mistakes by taking more active and attentive part in their own healthcare. By being aware of the most common errors, patients can look for ways to ask questions, review information, even examine test results with a critical eye toward their own health and specific situations. Chris Landon and Robert Fox show them how.
