The influence of the peer group typically peaks during adolescence, however, peer groups generally only affect short-term interests, unlike the family which has a long-term influence. In our society, adolescents are heavily influenced by their peers when it comes to dressing, musical fads, cheating, and drug use. In making their future life plans, however, they are influenced more by their parents than by their peers. Conversely, experimentation with drugs, drinking, vandalism, and stealing ...

Peer group is an important influence throughout one ' s life but they are more critical during the developmental years of childhood and adolescence. The Oxford Advanced Learners Dictionary [13] defined peer group as a group of people of same age or social status.

The Handbook of Social Influences in School Contexts draws from a growing body of research on how and why various aspects of social relationships and contexts contribute to children ' s social and academic functioning within school settings. Comprised of the latest studies in developmental and educational psychology, this comprehensive volume is perfect for researchers and students of Educational Psychology. Beginning with the theoretical perspectives that guide research on social influences, this book presents foundational research before moving on to chapters on peer influence and teacher influence. Next, the book addresses ways in which the school context can influence school-related outcomes (including peer and teacher-student relationships) with specific attention to research in motivation and cognition. Within the chapters authors not only present current research but also explore best-practices, drawing in examples from the classroom. With chapters from leading experts in the field, The Handbook of Social Influences in School Contexts provides the first complete resource on this topic.

Adolescence is a time when youth make decisions, both good and bad, that have consequences for the rest of their lives. Some of these decisions put them at risk of lifelong health problems, injury, or death. The Institute of Medicine held three public workshops between 2008 and 2009 to provide a venue for researchers, health care providers, and community leaders to discuss strategies to improve adolescent health.

The study of adolescence in the field of psychology has grown tremendously over the last two decades, necessitating a comprehensive and up-to-date revision of this seminal work. This multidisciplinary handbook, edited by the premier scholars in the field, Richard Lerner and Laurence Steinberg, and with contributions from the leading researchers, reflects the latest empirical work and growth in the field.

Scientists, educators, and parents of teens have long recognized the potency of peer influences on children and youth, but until recently, questions of how and why adolescents emulate their peers were largely overlooked. This book presents a comprehensive framework for understanding the processes by which peers shape each other's attitudes and behavior, and explores implications for intervention and prevention. Leading authorities share compelling findings on such topics as how drug use, risky sexual behavior, and other deviant behaviors "catch on" among certain peer groups or cliques; the social, cognitive, developmental, and contextual factors that strengthen or weaken the power of peer influence; and the nature of positive peer influences and how to support them.

Argues that children's development is influenced primarily by their peers--other children--rather than by their parents

Master's Thesis from the year 2014 in the subject Psychology - Miscellaneous, grade: A, . course: Msc, language: English, abstract: The aim of the present study was to find out the family and peer influences on adolescent drug addicts. The sample comprised of 110 adolescent (male) taken from the different areas of Khyber Pkhtoonkhwa. The instruments used were: (i) Index Of Family Relation (IFR). It consisted of a 5- point Likert type scale with 17 items. Seven items were positively coded, i.e. 1, 2, 4, 5, 8, 14 16 & 17 and 10 were negatively coded. (ii) Index Of Peer Relation (IPR). It comprised of a 5 point Likert scale with 13 items. Eleven were positively coded and 2 items (4 &5) were negative. For the statistical analysis Mean, Stander Deviation and t-value was calculated that t-test were used to analyze the relationship of high and low income group of addicts with their peers and with their family. The correlation between family influence and friends influenced on the addicts was checked. The results indicated that lower income groups of adolescent drug addicts have poor relationships with their family and strong relationship with their peers. Low income group of addicts have more intrafamilial problem then the high income group of addicts. The alpha reliability of both scales was also calculated. The reliability of IFR is .95 and reliability of IPR is .7

This book examines the role of peer relationships in child and adolescent development by tracking research findings from the early 1900s to the present. Dividing the research into three generations, the book describes what has been learned about children's peer relations and how children's participation in peer relationships contributes to their health, adjustment, and achievement. Gary W. Ladd reviews and interprets the investigative focus and findings of distinct research eras to highlight theoretical or empirical breakthroughs in the study of children's peer relations and social competence over the last century. He also discusses how this information is relevant to understanding and promoting children's health and development. In a final chapter, the author appraises the major discoveries that have emerged during the three research generations and analyzes recent scientific agendas and discoveries in the peer relations discipline.

From New York Times bestselling author and economics columnist Robert Frank, bold new ideas for creating environments that promise a brighter future Psychologists have long understood that social environments profoundly shape our behavior, sometimes for the better, often for the worse. But social influence is a two-way street—our environments are themselves products of our behavior. Under the Influence explains how to unlock the latent power of social context. It reveals how our environments encourage smoking, bullying, tax cheating, sexual predation, problem drinking, and wasteful energy use. We are building bigger houses, driving heavier cars, and engaging in a host of other activities that threaten the planet—mainly because that's what friends and neighbors do. In the wake of the hottest years on record, only robust measures to curb greenhouse gases promise relief from more frequent and intense storms, droughts, flooding, wildfires, and famines. Robert Frank describes how the strongest predictor of our willingness to support climate-friendly policies, install solar panels, or buy an electric car is the number of people we know who have already done so. In the face of stakes that could not be higher, the book explains how we could redirect trillions of dollars annually in support of carbon-free energy sources, all without requiring painful sacrifices from anyone. Most of us would agree that we need to take responsibility for our own choices, but with more supportive social environments, each of us is more likely to make choices that benefit everyone. Under the Influence shows how.
