Toxic mold lawsuits are particularly complicated, as they often involve multiple causes of action, can implicate a wide range of potential defendants, and require specific medical and scientific expertise. Most toxic mold lawsuits against building owners and landlords are settled before trial, but those filed against homeowner's insurance providers typically are resolved at trial.

If a judge or jury agrees that the landlord negligently created a mold problem or allowed one to continue at a property, the landlord could be on the hook for any harm. For example, a long-time tenant at a New York City apartment building complained to her landlord after she discovered signs of mold on her apartment walls, which her doctor ...

The Prop Builder's Molding & Casting Handbook This is the first book to contain, in one comprehensive volume, every molding and casting procedure of use to the theater props builder (no matter what his or her level or proficiency). The author demonstrates the techniques involved in using more than thirty different materials ranging from papier-mache to breakaway glass. While the use of some materials–plaster and polyester resins, for example–is covered to some extent in other publications, information on the selection and use of rubber materials (latex, neoprene, silicone, and the urethanes) and the procedure for making breakaway windows and bottles is available only in The Prop Builder's Molding & Casting Handbook. Written in an easy, conversational style, the book will be useful to anyone involved with theater properties, puppetry, and costuming (as professionals or amateurs). It will also serve admirably the needs of students taking classes in those subjects. Completing the book is a special section on designing and building a vacuum forming machine suitable for use in constructing theater props. More than 450 photographs illustrate the step-by-step procedures explained throughout the entire text.

Mouldmaking and Casting is a technical manual of the many techniques of this ancient craft and art form. With step-by-step illustrations, it explains the materials required and the processes involved to create reproductions of a range of pieces. The book covers traditional techniques as well as today's more advanced technical methods.

The scope and potential of mouldmaking and casting is fascinating, and makes it one of the most exciting processes available to today's craftsmen. Its opportunities have been developed and expanded further by a range of new methods and materials only recently made available to the domestic market. Aimed equally at the student with little pre-existing knowledge and the professional wishing to further their skill base, this book provides an invaluable learning and reference tool for the studio or workshop of any artist, model maker or designer. Covers: jesmonite mould making and casting, bioresin casting, life moulding silicone from the body, large-scale clay press moulding, embedding in clear resin, clay slip casting, plas-ti-shim moulding, and finishing. Supported by step-by-step sequences and full descriptions of traditional processes as well as new methods, it is illustrated throughout with 212 colour photographs.

The Fake Food Cookbook: Props You Can't Eat for Theatre, Film, and TV contains step by step instructions on how to create the most realistic prop food for a theatrical production. From appetizers such as oysters on a half shell and chicken wings, entrees such as lobster and honey-glazed ham, to desserts, breakfasts, and even beverages, every meal is covered in this how-to guide. Full color images of each step and finished products illustrate each recipe, along with suggestions for keeping the budget for each project low. Safety Data Sheets and links to informative videos are hosted on a companion website.

Have you been trying to think of a way to conquer your local comic convention through cosplay? Do you gaze with envious eyes upon the fan-made suits of armored awesomeness strolling around every year on Halloween? Do you have a spot on your wall, bookshelf, or desk that desperately needs to be filled with a screen-accurate replica of your favorite science-fiction or fantasy weapon? If so, look no further. We've got just the book for you! In this book, master prop maker Shawn Thorson uses his unique blend of humor and insight to turn years of painful experience into detailed explanations. He'll show you many of the tools, methods, and processes that you can use to create professional-looking science fiction and fantasy props and armor. The ultimate collision of creative imagination and practical maker skills, making props and costume armor involves sculpting, molding, casting, 3D printing, CNC fabrication, painting, and countless other techniques and technologies. In this book, you'll learn: Basic fabrication methods using inexpensive, commonly-available tools and materials Simple, low-cost methods to make foam armor out of easy-to-find foam mats How to use the popular Pepakura software to build 3D models with paper Multiple molding and casting techniques How to build a "vacuumforming" machine to make armor from plastic sheet stock Painting and weathering techniques that will bring your props to life Just enough safety advice to keep you from losing body parts along the way Whether you're just a beginner or a seasoned builder with countless projects behind you, this book is sure to be an invaluable addition to your workshop library.

A great source for Odyssey of the Mind or Destination Imagination. Very details instructions for props and make up. Small community theater should have the book available to those who are new on working on sets.
