"social determinants of health." A social gradient in health runs through society, with those that are poorest generally suffering the worst health.

## HISTORY OF PUBLIC HEALTH - Priory

These philosophical speculations about nature became enmeshed in dialogue with medical beliefs about health and sickness and they effected, in both immediate and intermediate ways, the views of ancient Greeks in defining health, in appreciating the need for developing skills and community development, in securing supportive environments, in developing healthy public policy and in re-orienting health services, in other words in serving to a great extent the basic concepts of health promotion ...

historical origins of the basic concepts of health ...

The history of public health tells us that the major improvements in the health of populations have resulted not through the efforts of medical systems orientated toward the care of individuals with specific diseases but through the improvement of general social conditions such as housing, food supply and quality, water, and sanitation (see Figure 1). Although this is a historical perspective, being mainly associated with the nineteenth century sanitary revolution that started in England in ...

one's living and working conditions, rather than individual risk factors that influence the risk for a disease, or vulnerability to disease or injury. The distributions of social determinants are often shaped by public policies that reflect prevailing political ideologies of the area. The World Health Organization

Social determinants of health -  
Wikipedia

**SOCIAL MODEL OF HEALTH:**This model emerged from the social model of disability, which has been strongly advocated by the disability rights movement. It was developed as a reaction to the traditional medical model. The social model of health examines all the factors which contribute to health such as social, cultural, political and the environment.

While there are competing views as to the scale of the influence of the social determinants of health (SDH), figure 1, compiled by the Kings Fund, demonstrates that social and environmental influences are highly significant, contributing to between 45% and 60% of the variation in health status. Providing universal access to good healthcare is therefore necessary, but insufficient to optimise the health of populations and reduce inequities in health.
