Wave is defined as the movement of any periodic motion like a spring, a pendulum, a water wave, an electric wave, a sound wave, a light wave, etc. A wave with constant amplitude. Any periodic wave that has amplitude varied with time, phase sinusoidally can be expressed mathematically as  $R(t) = R \sin(\omega t + \phi)$

Wave Motion The easiest wave to visualize is a water wave. When a pebble is dropped in a calm pool of water, ripples travel out from the point where the pebble enters the water. The disturbance travels out from the center of the pattern, but the water does not travel with the wave.

A wave in which particles of the medium move in a direction perpendicular to the direction that the wave moves. Transverse waves are characterized by particle motion being perpendicular to wave motion. If a rope is stretched out horizontally & the end is vibrated back-and-forth in a vertical direction, a transverse wave would result.

A progressive wave is a wave that continuously moves away from the source. When two progressive waves equal in amplitude and travelling in opposite directions superpose on each other, the resultant wave is referred to as a stationary or standing wave. It is a common occurrence in stringed instruments.

Waves & Sound. Foundation Physics Foundation Physics. Waves. • A wave is a disturbance that propagates through space and time, usually with transfer of energy. While a mechanical wave exists in a medium (which on deformation is capable of producing elastic restoring forces) waves of producing elastic restoring forces), waves of electromagnetic radiation (and probably gravitational radiation)g,, can travel through vacuum, that is, without a medium.
